How To Use This Guide

Mid-Size Cars

Manufacturer	Estimated MPG	Engine size (Cubic inches and number of cylinders)	D for Diesel T for Turbo G for Guzzler Tax R for Rotary TD for Turbo-Diesel
CHEVROLET	27	A3 263/6	D
Celebrity	21	M4 173/6	
Citation II			
Model Name			

Transmission
M for Manual (solid bar), with number of gears.
A for Automatic (open bar), with number of gears.

See Index for
Interior Volume for each vehicle

See below for
additional information on:

- how to use the Guide,
- how the cars are tested,
- annual fuel costs.

The *Gas Mileage Guide* is published by the U.S. Department of Energy in compliance with Public Law 94-163, and is based on estimates provided by the U.S. Environmental Protection Agency.

The Department of Transportation is empowered to penalize dealers who fail to display the Guides as prescribed by law. All new car and light duty truck dealers are required to have copies of this Guide available and prominently displayed in their showrooms.

How To Use This Guide

To help compare the fuel economy of similarly sized passenger cars and station wagons, these vehicles are grouped in classes according to interior size. Trucks are grouped by capacity in terms of gross vehicle weight. The manufacturers are listed alphabetically under each size class. Car lines are listed alphabetically under each manufacturer. The bar to the right of each model illustrates the vehicle's estimated mpg for each transmission and engine combination offered.

CAR CLASSES

- Sedans**
Minicompact—Less than 85 cubic feet of passenger and luggage volume (page 3)
Subcompact—Between 85 and 100 cubic feet of passenger and luggage volume (pages 3-4)
Compact—Between 100 and 110 cubic feet of passenger and luggage volume (pages 4-5)
Mid-Size—Between 110 and 120 cubic feet of passenger and luggage volume (page 5-6)
Large—120 or more cubic feet of passenger and luggage volume (page 6)

- Two Seaters**—Cars designed to seat primarily two adults (page 6)
Station Wagons
Small—Less than 130 cubic feet of passenger and cargo volume (page 7)
Mid-Size—Between 130 and 160 cubic feet of passenger and cargo volume (page 7)
Large—160 or more cubic feet of passenger and cargo volume (page 8)

TRUCK CLASSES

- Vans** — Passenger (page 8) Cargo (page 8)
Small Pickups—Trucks having Gross Vehicle Weight Ratings (GVWR, truck weight plus carrying capacity) under 4,500 pounds; 2-Wheel Drive (page 9). 4-Wheel Drive (page 9)
Large Pickups—Trucks having GVWR's of 4,500 to 8,500 pounds. 2-Wheel Drive (page 9). 4-Wheel Drive (page 10)

SPECIAL PURPOSE VEHICLES

- All other light vehicles not in another car or truck class; 2-Wheel Drive (page 11).
 4-Wheel Drive (pages 11-12). Cab chassis (page 12).

Manufacturer, Car Line Names, and Interior Volume

The manufacturers are listed alphabetically within each size class. Car lines are listed alphabetically under each manufacturer.

The interior volume is listed in the index for each body style (2-door, 4-door, and hatchback) except two seaters and is a way of estimating the space in a car. It is based on four measurements—head room, shoulder room, hip room, and leg room—for the front and rear seats, plus trunk capacity. The interior volume is given two numbers (in cubic feet; example 87/12). The first is an estimate of the size of the passenger compartment; the second, the size of the trunk or, in station wagons and hatchbacks, the cargo space behind the second seat.

Vehicle Description

Each line in the Guide shows an engine-transmission combination available within the listed car line identified by the following designations:

Engine Description—Size listed by cubic inch displacement. The engine number differentiates between 4-, 5-, 6-, and 8 cylinder engines of 1 and 2 rotors (for example, 97/4). When engine size and number of cylinders are not an adequate description of an engine, the following engine-type designations are also given:

- R Rotary engine
- D Diesel engine
- T Turbocharged
- TD Turbo-Diesel
- G Gas Guzzler Tax applies. See below for details.

* Check the Fuel Economy Label on the vehicle in the dealer's showroom for its MPG rating. The MPG will vary because of engine emission controls and fuel system differences not listed in the Guide.

Prior to purchase, check with your dealer and read the fuel economy label affixed to every car for information on the exact engine with which that vehicle will be equipped.

Transmission The following abbreviations are used to describe the type of transmission.

- S2 Semiautomatic two speed
- A3 Automatic three speed
- A4 Automatic four speed
- M3 Manual three speed
- M4 Manual four speed
- M4C Manual four speed with creeper first gear
- M5 Manual five speed
- M8 Dual range manual four speed

Gas Guzzler Tax

The Energy Tax Act of 1978 established a Gas Guzzler Tax on the sale of new model year vehicles whose fuel economy fails to meet certain statutory levels. The fuel economy figures used to determine the Gas Guzzler Tax are different from the fuel economy values contained in this booklet. The tax does not depend on your actual on-the-road mpg, which may be more or less than the EPA published value.

The purpose of the Gas Guzzler Tax is to discourage the production and purchase of fuel inefficient vehicles. The amount of any applicable Gas Guzzler Tax paid by the manufacturer will be disclosed on the automobile's fuel economy label.

How the Fuel Economy Estimates Are Obtained

The estimates of the miles each vehicle can cover on a gallon of fuel are based on results of the U.S. Environmental Protection Agency (EPA) "Emissions Standards Test Procedure."

This procedure is used by EPA to certify that cars, vans, and light trucks comply with the Clean Air Act, as amended. Each year, manufacturers submit new vehicle models to EPA. The procedure is used to test for exhaust emissions under simulated everyday urban driving conditions.

Each vehicle is tested under controlled laboratory conditions by a professional driver. By using a dynamometer to simulate driving conditions, the driver can test each vehicle under identical conditions, in exactly the same way each time. Therefore, the results that are obtained can be compared accurately.

The test vehicles are broken in, properly maintained, and driven in test conditions which simulate warm weather and dry, level roads. The quality of the fuel used is also very closely controlled.

The test simulates a 7.5-mile, stop-and-go trip with a speed range of 0 to 55 mph and an average speed of 20 mph. The trip takes 23 minutes and has 18 stops. About 18 percent of the time is spent idling, as in city driving at traffic lights or in rush-hour traffic.

Annual Fuel Costs

Fuel costs are changing rapidly and vary considerably by area. The following chart enables you to estimate annual fuel costs using fuel prices in your area. These costs are based on 15,000 miles driving per year. (The annual fuel cost displayed on the fuel economy label of 1984 cars is based on 15,000 miles of driving and a gasoline cost of \$1.25 per gallon or diesel fuel at \$1.20 per gallon.)

ANNUAL FUEL COSTS CHART
For 1984 Model Year
Based on 15,000 Miles per Year

Est. MPG	1.05	1.55	1.45	1.35	1.25	1.15

How This Guide Can Help You

When you have determined the size and type car that can best satisfy your needs, next consider other important factors, such as number of cylinders and type of transmission. Then use miles per gallon estimates and the fuel costs chart to help you decide which model to buy.

For those preferring the metric system, 3.785 liters equals one gallon. The mpg ratings are ESTIMATES, NOT guaranteed fuel economy CLAIMS. They are published to help you COMPARE the RELATIVE mpg of each model in a vehicle class.

Two kinds of engine starts are used—the cold start, which is similar to starting a car in the morning after it has been parked all night, and the hot start, similar to restarting a vehicle after it has been warmed up, driven and stopped for a short time. The test conditions are those EPA must use to assure accurate emissions measurements. However, NO test can cover ALL possible combinations of actual road conditions, climate, driving and car-care habits of individual drivers. Bear in mind that while EPA tests provide a measure of how much fuel each vehicle uses under precisely controlled laboratory conditions, they CANNOT PREDICT EXACTLY WHAT MILEAGE YOU PERSONALLY WILL ACHIEVE.
