How To Use This Guide

Mid-Size Cars

Manufacturer	Model Name	TRANS	Estimated MPG		ENG/CYL
			CITY	HWY	
DODGE	Aries	A4	22	36	350/8 D
		M4	25	38	151/4 TD*

Transmission
 M for Manual (dark) with number of gears.
 A for Automatic (light) with number of gears.

Engine size
 (Cubic inches and number of cylinders)

D for Diesel
 T for Turbo
 G for Guzzler Tax
 R for Rotary
 TD for Turbo Diesel
 P for Premium Unleaded Fuel
 * see your dealer

*Check the Fuel Economy Label on the Vehicle at the dealer's showroom for its MPG ratings. The MPG will vary because of engine emission controls and fuel system differences not listed in the Guide.

See below for additional information on:

- how to use the Guide,
- how the cars are tested,
- annual fuel costs.

See Index for:

Interior Volume for each vehicle

The *Gas Mileage Guide* is published by the U.S. Department of Energy in compliance with Public Law 94-163, and is based on estimates of vehicle performance measured in miles per gallon (mpg) provided by the U.S. Environmental Protection Agency.

All new car and light duty truck dealers are required to have copies of this *Guide* available and prominently displayed in their showrooms. The Department of Transportation is empowered to penalize dealers who fail to display the *Guides* as prescribed by law.

How To Use This Guide

To help compare the fuel economy of similarly sized passenger cars and station wagons, these vehicles are grouped in classes according to interior size. Trucks are grouped by capacity in terms of gross vehicle weight. The manufacturers are listed alphabetically under each size class. Car models are listed alphabetically under each manufacturer. The numbers listed under the column headings "City" and "Hwy" indicate the vehicle's estimated mpg for city and highway driving for each transmission and engine combination offered.

CAR CLASSES

Sedans

Minicompact—Less than 85 cubic feet of passenger and luggage volume (page 3)

Subcompact—Between 85 and 100 cubic feet of passenger and luggage volume (pages 3 and 4)

Compact—Between 100 and 110 cubic feet of passenger and luggage volume (pages 4 and 5)

Mid-Size—Between 110 and 120 cubic feet of passenger and luggage volume (pages 5 and 6)

Large—120 or more cubic feet of passenger and luggage volume (page 6)

Two Seaters—Car designed to seat primarily two adults (page 3)

Station Wagons

Small—Less than 130 cubic feet of passenger and cargo volume (page 6)

Mid-Size—Between 130 and 160 cubic feet of passenger and cargo volume (page 7)

Large—160 or more cubic feet of passenger and cargo volume (page 7)

TRUCK CLASSES

Vans—Passenger (pages 9 and 10), Cargo (page 9)

Small Pickups—Trucks having Gross Vehicle Weight Ratings (GVWR, truck weight plus carrying capacity) under 4,500 pounds; 2-Wheel Drive (pages 7 and 8), 4-Wheel Drive (page 8)

Large Pickups—Trucks having GVWR's of 4,500 to 8,500 pounds; 2-Wheel Drive (page 8), 4-Wheel Drive (pages 8 and 9)

SPECIAL PURPOSE VEHICLES

All other light vehicles not in another car or truck class; 2-Wheel Drive (page 10), 4-Wheel Drive (pages 10 and 11), Cab chassis (page 11).

Manufacturer, Car Model Names and Interior Volume

The manufacturers are listed alphabetically within each size class. Car models are listed alphabetically under each manufacturer.

The interior volume is listed in the index for each body style (2-door, 4-door, and hatchback) except for two seaters, and is a way of estimating the space in a car. It is based on four measurements - head room, shoulder room, hip room, and leg room - for the front and rear seats, plus trunk capacity. The interior volume is given as two numbers (in cubic feet; example 87/12). The first is an estimate of the size of the passenger compartment; the second, the size of the trunk. In station wagons and hatchbacks, the cargo space behind the second seat.

Vehicle Description

Each line in the *Guide* shows an engine-transmission combination available within the listed car model identified by the following designations:

R Rotary engine
D Diesel engine
T Turbocharged
TD Turbo-Diesel
G Gas Guzzler Tax applies. See below for details.
P Premium Unleaded Fuel

* Check the Fuel Economy Label on the Vehicle at the dealer's showroom for its MPG ratings. The MPG will vary because of engine emission controls and fuel system differences not listed in the *Guide*.

Prior to purchase, check with your dealer and read the fuel economy label affixed to every car for information on the exact engine with which that vehicle will be equipped.

Transmission—The following abbreviations are used to describe the type of transmission.

A3 Automatic three speed
A4 Automatic four speed
A8 Dual range automatic four speed
L3 Automatic lockup three speed
L4 Automatic lockup four speed
L8 Dual Range automatic lockup four speed
M3 Manual three speed
M4 Manual four speed
M4C Manual four speed with creeper first gear
M5 Manual five speed

Gas Guzzler Tax

The Energy Tax Act of 1978 established a Gas Guzzler Tax on the sale of new model year vehicles whose fuel economy fails to meet certain statutory levels. The fuel economy figures used to determine the Gas Guzzler Tax are different from the fuel economy values contained in this booklet. The tax does not depend on your actual on-the-road mpg, which may be more or less than the EPA published value.

The purpose of the Gas Guzzler Tax is to discourage the production and purchase of fuel inefficient vehicles. The amount of any applicable Gas Guzzler Tax paid by the manufacturer will be disclosed on the automobile's fuel economy label.

How the Fuel Economy Estimates Are Obtained

The fuel economy estimates are based on results of the U.S. Environmental Protection Agency (EPA) official emissions and fuel economy test procedures. These procedures are used to certify that vehicles meet the Federal emissions and fuel economy standards. Each year, manufacturers test new car models and submit the test results to EPA. EPA runs its own confirmatory tests on the test vehicles. These test vehicles have been broken in and properly maintained. Each vehicle is tested under controlled laboratory conditions by a professional driver. By using a dynamometer to simulate driving conditions, the driver can test each vehicle under identical conditions, in exactly the same way each time. Therefore, the results that are obtained can be compared accurately. The quality of the test fuel used is also carefully controlled.

Two tests are used to generate the two different fuel economy estimates in this booklet. Both tests are representative of typical everyday operation.

The test used to determine the city fuel economy estimate represents driving "around town". The test simulates a 7.5 mile, stop-and-go trip with an average speed of 20 mph. The trip takes 23 minutes and has

18 stops. About 18 percent of the time is spent idling, as in waiting at traffic lights or in rush hour traffic. Two kinds of engine starts are used — the cold start, which is similar to starting a car in the morning after it has been parked all night, and the hot start, similar to restarting a vehicle after it has been warmed up, driven and stopped for a short time.

The test to determine the *highway* fuel economy estimates represents a mixture of "non-city" driving. Segments corresponding to different kinds of rural roads and interstate highways are included. The test simulates a 10 mile trip and averages 48 mph. The test is run from a hot start, and has very little idling time and no stops (except at the end of the test).

NOTE: Starting with the 1985 model year, EPA's procedure for determining mileage estimates now accounts for the difference between laboratory fuel economy and actual road fuel economy. The laboratory fuel economy results are adjusted downward to arrive at the estimates in this booklet and on the labels seen on new cars. The city estimate is lowered by 10 percent and the highway estimate by 22 percent from the estimates obtained in the laboratory. This makes the mileage estimates correspond more closely to the mpg obtained by the average driver. For the 1985 and 1986 model years, additional language will appear on the fuel economy labels affixed to new cars, noting the "estimated mpg" rating that the model would have received under the test procedures followed in previous years.

No test can simulate all possible combinations of conditions, climate, driver behavior and car care habits. Your actual mileage depends on how, when, and where you drive. EPA has found that the mpg obtained by most drivers will be within plus or minus 15 percent of the estimates in this booklet.

How This Guide Can Help You

When you have determined the size and type of car that can best satisfy your needs, next consider other important factors, such as the number of cylinders and the type of transmission. Then use miles per gallon estimates and the fuel costs chart to help you decide which model to buy.

For those who purchase gasoline by the liter, 3.785 liters equals one gallon.

The mpg ratings are ESTIMATES, NOT guaranteed fuel economy CLAIMS. They are published to help you COMPARE the RELATIVE mpg of each model in a vehicle class.

Annual Fuel Costs

Fuel costs are continually changing and vary considerably by area. The following chart enables you to estimate annual costs using fuel prices in your area. These costs are based on 15,000 miles of driving per year. The annual fuel cost displayed on the fuel economy label of 1985 cars is based on 15,000 miles of driving and costs of \$1.35 per gallon for premium unleaded gasoline, or \$1.25 per gallon for regular unleaded gasoline, or \$1.20 per gallon for diesel fuel. It is suggested that you use the chart to figure your costs by first calculating the cost for the estimated highway mpg for your car and then the cost for the estimated city mpg. Multiply each value by the percent of your total driving that is done in the city and the percent that is done on the highway and add the two values together to yield the total cost. For example, for someone who did 80 percent city driving and 20 percent

highway driving and who was considering purchasing a car which was listed as achieving 35 mpg for highway driving and 21 mpg for city driving, the calculation would appear as:

city driving mpg.....\$892
 highway driving mpg.....\$536, assuming
 gasoline cost \$1.25 per gallon.
 Then, $(\$892 \times 0.8) + (\$536 \times 0.2) = \$821$, the total annual cost for fuel.

The reader is cautioned that simply averaging the mpg for city and highway driving and then looking up a single value in the table will yield an incorrect answer.

ANNUAL FUEL COSTS CHART
 For 1985 Model Year
 Based on 15,000 Miles per Year

Est MPG	Dollars Per Gallon
