Purpose of the Guide

The Gas Mileage Guide is published as an aid to consumers considering the purchase of a new vehicle by the U.S. Department of Energy in compliance with Public Law 94-163. It is based on estimates of vehicle performance measured in miles per gallon (mpg) provided by the U.S. Environmental Protection Agency.

- The mileage figures listed in this Guide are most useful when comparing vehicles.
- Your actual mileage driving one of these vehicles may differ considerably from the predicted mileage.

This Guide is intended to help you compare the fuel economy of similarly sized cars, light duty trucks and special purpose vehicles. The vehicles listed in this Guide have been divided into three classes of cars (sedans, two-seaters and station wagons), three classes of light duty trucks (vans, small pick-ups, and large pick-ups), and three classes of special purpose vehicles (2-wheel drive, 4-wheel drive, and cab chassis).

By using this Guide you should be able to estimate the average yearly fuel cost for the vehicle you choose to purchase.

All new car and light duty truck dealers are required to have copies of this Guide available and prominently displayed in their showrooms. The Department of Transportation is empowered to penalize dealers who fail to display the Guides as prescribed by law.

Interior Volume

The interior volume is listed in the index for each body style (2-door, 4-door, and hatchback) except for two seaters, and is a way of estimating the space in a car. It is based on four measurements - head room, shoulder room, hip room, and leg room - for the front and rear seats, plus trunk capacity. The interior volume is given as two numbers (in cubic feet; example 87/12). The first is an estimate of the size of the passenger compartment; the second, the size of the trunk or, in station wagons and hatchbacks, the cargo space behind the second seat.

How the Fuel Economy Estimates Are Obtained

The fuel economy estimates are based on results of the U.S. Environmental Protection Agency (EPA) official emissions and fuel economy test procedures. These procedures are used to certify that vehicles meet the Federal emissions and fuel economy standards. Each year, manufacturers test new car models and submit the test results to EPA. EPA runs its own confirmatory tests on the test vehicles. These test vehicles have been broken in and properly maintained. Each vehicle is tested under controlled laboratory conditions by a professional driver. By using a dynamometer to simulate driving conditions, the driver can test each vehicle under identical conditions, in exactly the same way each time. Therefore, the results that are obtained can be compared accurately. The quality of the test fuel used is also carefully controlled.

Two tests are used to generate the two different fuel economy estimates in this booklet. Both tests are representative of typical everyday operation.

The test used to determine the *city* fuel economy estimate represents driving "around town". The test simulates a 7.5 mile, stop-and-go trip with an average speed of 20 mph. The trip takes 23 minutes and has 18 stops. About 18 percent of the time is spent idling, as in waiting at traffic lights or in rush hour traffic. Two kinds of engine starts are used - the cold start, which is similar to starting a car in the morning after it has been parked all night, and the hot start, similar to restarting a vehicle after it has been warmed up, driven and stopped for a short time.

The test to determine the *highway* fuel economy estimates represents a mixture of "non-city" driving. Segments corresponding to different kinds of rural roads and interstate highways are included. The test simulates a 10 mile trip and averages 48 mph. The test is run from a hot start, and has very little idling time and no stops (except at the end of the test).

NOTE: Starting with the 1985 model year, EPA's procedure for determining mileage estimates accounts for the difference between laboratory fuel economy and actual road fuel economy. The laboratory fuel economy results are adjusted downward to arrive at the estimates in this booklet and on the labels seen on new cars. The city estimate is lowered by 10 percent and the highway estimate by 22 percent from the estimates obtained in the laboratory. This makes the mileage estimates correspond more closely to the mpg obtained by the average driver. For the 1986 model year, additional language will appear on the fuel economy labels affixed to new cars, noting the "estimated mpg" rating that the model would have received under the test procedures followed in previous years.

Factors Affecting MPG

No test can simulate all possible combinations of conditions, climate, driver behavior and car care habits. Your actual mileage depends on how, when, and where you drive. EPA has found that the mpg obtained by most drivers will be within plus or minus 15 percent of the estimates in this booklet.

Factors that Can Raise Fuel Economy

- Plan trips that combine errands.
- Turn an engine off rather than letting it idle for more than a minute.
- Get tune-ups or change spark plugs, air filter, and fuel filter at regular intervals. This will help a car run more smoothly and efficiently.
- Keep the tires inflated at the manufacturer's recommended maximum pressure.
- Anticipate upcoming stops in the general flow of traffic which will allow the car to operate more efficiently.

Factors that Can Lower Fuel Economy

- Fast starts waste money by feeding the engine more fuel than it can handle efficiently.
- As speed increases over 55 miles per hour, fuel economy drops quickly. Traveling at 65 mph instead of 55 mph lowers fuel economy over 15 percent.
- Carrying unnecessary weight in the vehicle.
- Revving the engine before it is shut off is not necessary on today's cars and will just use more fuel.
- A car with the front wheels out of alignment will use more fuel.

Annual Fuel Costs

Fuel costs are continually changing and vary considerably by area. The following chart enables you to estimate annual costs using fuel prices in your area. These costs are based on 15,000 miles of driving per year. The annual fuel cost displayed on the fuel economy label of 1986 cars is based on 15,000 miles of driving and costs of \$1.35 per gallon for premium unleaded gasoline, or \$1.25 per gallon for regular unleaded gasoline, or \$1.20 per gallon for diesel fuel*. It is suggested that you use the chart to figure your costs by first calculating the cost for the estimated highway mpg for your car and then the cost for the estimated city mpg. Multiply each value by the percent of your total driving that is done in the city and the percent that is done on the highway and add the two values together to yield the total cost. For example, for someone who did 80 percent city driving and 20 percent highway driving and who was considering purchasing a car which was listed as achieving 35 mpg for highway driving and 21 mpg for city driving, the calculation would appear as:

city driving mpg \$892 and
highway driving mpg \$536, assuming
gasoline cost \$1.25 per gallon.
Then, $(\$892 \times 0.8) + (\$536 \times 0.2) = \$821$, the total annual cost for fuel.

The reader is cautioned that simply averaging the mpg for city and highway driving and then looking up a single value in the table will yield an incorrect answer.

*Because of the constant changes in the price of gasoline, fuel economy labels may use different values in estimating the annual fuel cost.

ANNUAL FUEL COSTS CHART
For 1986 Model Year
Based on 15,000 Miles per Year

Est MPG	Dollars Per Gallon

Vehicle Classes

CARS

Sedans

Minicompact—Less than 85 cubic feet of passenger and luggage volume (page 4)

Subcompact—Between 85 and 100 cubic feet of passenger and luggage volume (pages 4 and 5)

Compact—Between 100 and 110 cubic feet of passenger and luggage volume (pages 5 and 6)

Mid-Size—Between 110 and 120 cubic feet of passenger and luggage volume (pages 6 and 7)

Large—120 or more cubic feet of passenger and luggage volume (page 7)

Two Seaters—Car designed to seat primarily two adults (page 4)

Station Wagons

Small—Less than 130 cubic feet of passenger and cargo volume (page 7 and 8)

Mid-Size—Between 130 and 160 cubic feet of passenger and cargo volume (page 8)

Large—160 or more cubic feet of passenger and cargo volume (page 8)

TRUCKS

Vans—Passenger (page 11), Cargo (pages 10 and 11)

Small Pickups—Trucks having Gross Vehicle Weight Ratings (GVWR, truck weight plus carrying capacity) under 4,500 pounds; 2-Wheel Drive (pages 8 and 9), 4-Wheel Drive (page 9)

Large Pickups—Trucks having GVWR's of 4,500 to 8,500 pounds; 2-Wheel Drive (page 9), 4-Wheel Drive (pages 9 and 10)

SPECIAL PURPOSE VEHICLES

All other light vehicles not in another car or truck class; 2-Wheel Drive (page 11), 4-Wheel Drive (pages 11 and 12), Cab chassis (page 12).

The manufacturers are listed alphabetically within each size class. Car models are listed alphabetically under each manufacturer.

Transmission Types

A3	Automatic three speed
A4	Automatic four speed
A8	Dual range automatic four speed
L3	Automatic lockup three speed
L4	Automatic lockup four speed
L8	Dual Range automatic lockup four speed
M3	Manual three speed
M4	Manual four speed
M4C	Manual four speed with creeper first gear
M5	Manual five speed

Gas Guzzler Tax

The Energy Tax Act of 1978 established a Gas Guzzler Tax on the sale of new model year vehicles whose fuel economy fails to meet certain statutory levels. The fuel economy figures used to determine the Gas Guzzler Tax are different from the fuel economy values contained in this booklet. The tax does not depend on your actual on-the-road mpg, which may be more or less than the EPA published value.

The purpose of the Gas Guzzler Tax is to discourage the production and purchase of fuel inefficient vehicles. The amount of any applicable Gas Guzzler Tax paid by the manufacturer will be disclosed on the automobile's fuel economy label.

Check the Fuel Economy Label on the Vehicle at the dealer's showroom for its MPG ratings. The MPG will vary because of engine emission controls and fuel system differences not listed in the Guide.
